

DuraFuse™ brings contemporary colors and profiles to cabinet refacing with the Qwikkit delivery method that ensures the quality and speed you need. Shaker, seamless, and woodgrain finishes are built with a process that fuses films directly to furniture-grade MDF. With Qwikkit, you get a solution that is fast, easy, and affordable with the industry's best warranty.

Contemporary Profiles ▶

Shaker, raised panel, clean seamless door profiles are available in solid and woodgrain finishes. The contemporary styles for renovation projects' specifications are available in the Qwikkit refacing system that has everything you need to complete your project.

Construction ▶

DuraFuse uses a heat-pressed film fused to furniture-grade MDF to create a smooth and sealed surface, prefinished, and requires no painting or finishing on site.

Consistent Finish ▶

DuraFuse doors are produced in a multi-step, controlled process. Colors and finishes match across every order. When you reorder, what arrives matches what is already installed.

No Demolition Required ▶

DuraFuse installs over existing cabinet boxes using the same no-demo process Qwikkit is known for. No tear out, no disruption. A fresh contemporary look without a full renovation.

Flexibility ▶

You can keep up with style and color changes with a product that can be customized in weeks instead of months.

3-Way Warranty

1. Full refund
if not satisfied within
30 days of installation.

2. Free replacement
for any product failure or
delamination under normal
use within six years.

3. Lifetime warranty
on hinges and hardware.
